The exact date when the app comes out to the App Store remains a mystery, but it is certain the app has been a long time coming after the success of Apple's new line of iPads. While the app seems to be rather straightforward and simple,

it contains two versions and a few different skins that can be used for adding special effects and editing images. One of the skins is particularly interesting since it comes with the ability to add pieces of text to an image; this can be done in a variety of different font styles and colors. Other features include the ability to save the current drawing to your camera roll, the ability to

auto-crop images, the ability to draw circles and add simple line drawings, and the ability to record your voice or a verbal message for extra effects. The app can be installed on a Mac and can also be used on a PC. The following options are contained in the app: Save to camera roll Add text to your photo Auto-crop Draw circles Draw a line Use the library Use the template Draw text Record

capabilities, the app works great and can be used to create a simple collection of images with ease. One of these apps is BrushKit, which has some of the same features as

iPhotoDraw but also offers the ability to import Brushes. Apple's Aperture has been the standard for digital image editing on Macs for quite some time, so it's not easy for many users to adapt to using a different application. Apple is all too aware of this trend, however, so has created a new app that's packed with all the editing tools needed to make image editing a piece of

With the iPhotoDraw Portable you can quickly create natural looking graphics. In addition, you can add custom (invisible) text captions and colorize the photo. In addition, you can apply a variety of effects to the picture: a vintage look and look. Create a print ready photo by downloading the iPhotoPrint Pro feature.

Marcel, I have to tell you the adventure with using your stand-alone software. I bought the DVD version and it doesn't work properly. I thought it could be because of the versions being different, but the updater didn't show anything. Then, I bought the portable version, it installed without problems and I tried to open the software. It said that iPhotoDraw is already on

use. I decided to uninstall the original software completely and reinstall the Portable version, so I removed the iPhotoDraw.application file from the program folder and then I installed the correct version. The new installation works just fine, but it didn't accept the old configuration: when I create a new drawing, the original default options are set to the last drawing with the

old version, and the number of drawings are removed from the program. Also, the background picture is removed. If you have any solution, please let me know. One more thing about this software that is important. If you create a picture with the software, a mask is created with the picture as background. I forgot that mask and now when I try to delete it with the built in

editor (it opens a dialog box saying that the picture was created using the iPhotoDraw software), I can't delete it and I can't move it to another layer. I can only hide or show it. So I have to remove the picture altogether and try to re-create it without the mask. On newer Windows, Windows XP SP3 and OS X, you can get the stand-alone iPhotoDraw for Windows from the Adobe Systems

Download Center for Windows. This is the same software as the one available on the Mac. You can download it here and get it from the Mac App store here. You'll then be able to install it on a computer that doesn't already have iPhoto and Photoshop, as well as iPhotoDraw (for the Mac). You are right, iPhotoDraw Portable and the Standalone version of

iPhotoDraw are two different things. I made this mistake too. I was trying to learn by trial and error, and I thought that because they both were called iPhoto

Potentially, the user interface might not be that intuitive, but it is fully functional in every way. The program has an extensive feature set, and the options are well labeled, making navigation

very easy. The application is optimized for the Windows operating system, which means it needs .NET Framework 4.0 or later versions. In terms of hardware requirements, the application is capable of working on low-end computers. It still needs powerful GPUs to work best.
